Portfolio: harungecit.dev

PROFESSIONAL SUMMARY

Senior AI Engineer and Full Stack Developer with 15+ years in production software and 2+ years shipping LLM systems. Works as a forward-deployed AI engineer: sits with operations, support and sales teams, maps how the work really flows, and turns it into LLM agents with tool calling, decision rules, guardrails and cost controls that run in production, from a text-to-SQL assistant with PageIndex-style RAG to an LLM triage service on four interchangeable providers including self-hosted llama.cpp. Polyglot backend engineer in Python, Go, PHP/Laravel and Node.js; backend architect of a TÜBİTAK 1501-funded R&D platform. 100+ projects shipped.

Core skills: LLM agents, tool calling, RAG (PageIndex, pgvector), MCP, guardrails, multi-provider LLM failover, Python, Go, PHP/Laravel, Node.js, TypeScript, PostgreSQL, Next.js, Cloudflare Workers, Docker, Kubernetes.

PROFESSIONAL EXPERIENCE

Software Architect & AI Engineer

CatchPad Smart Training Platform, Istanbul, Türkiye

April 2022 – Present

AI-powered athletic training platform, TÜBİTAK 1501 R&D project; lead backend architect, 1,400+ commits

- Lead the backend architecture (Laravel 13, PostgreSQL, Redis, Elasticsearch) with a React member dashboard and GitHub Actions pipelines to sandbox and production behind Cloudflare.
- Shipped an admin AI assistant on the Laravel AI SDK: a page-aware, tool-calling agent for text-to-SQL and metric lookups behind a 6-layer read-only guard (SELECT-only, table blocklist, read-only transaction, timeout, row cap, KVKK/GDPR masking).
- Grounded the assistant with PageIndex-style, vectorless RAG: the agent navigates the index of a 59-module panel manual and a contract-tested metric glossary, then pulls only the matching sections into context.
- Built multi-provider LLM failover (OpenRouter Gemma 4, Gemini Flash, NVIDIA NIM Nemotron) with in-request model fallbacks, degenerate-answer detection and retry, admin-set provider priority and per-chat limits and token tracking.
- Shipped AI Coach: four structured-output agents for nutrition plans, meals, training programmes and progress insights; tools pin the model to real catalogue IDs, a code-level guard enforces 14 allergens and diet rules, results stay drafts, tokens and cost are logged.
- Delivered the TÜBİTAK AI Lab work package: k-means++ athlete segmentation (silhouette, Davies-Bouldin), weighted 0–100 performance scoring and an LLM drill generator validated by JSON Schema with a deterministic rule-engine fallback.
- Designed an omnichannel AI sales and support centre: one agent core for voice, WhatsApp, e-mail and Telegram; a narrow tool API with identity levels, capped discounts and human handoff; persona design, eval-gated model choice and shadow mode.
- Replaced a quota-bound Make.com workflow with a Python service (Shopify GraphQL, ClickUp, Google People API) on GitHub Actions with diff-only writes, rate limiting, checkpointed state and safety brakes.
- Technologies: Laravel AI SDK, LLM agents, tool calling, RAG, PageIndex, Gemini, OpenRouter, NVIDIA NIM, Python, Laravel, PostgreSQL, React.

Senior Full Stack Developer & AI Engineer

USTEK RFID Elektronik Yazılım A.Ş., Istanbul, Türkiye

July 2022 – Present

Enterprise RFID, IoT and ERP software for textile tracking

- Built a multilingual LLM support-intelligence service in Go (11 supported languages) that reads customer support channels on WhatsApp, classifies every message by type, priority, category, sentiment and resolution, and translates it for the team; its first version ran on Node.js (Express, Socket.io).
- Designed its runtime-switchable LLM provider layer (Gemini, Groq Llama 3.3 70B, OpenRouter, self-hosted llama.cpp) with usage tracking; prompts are generated from YAML domain profiles and pinned by golden-file tests, and an MCP server (Go SDK) gives Claude read-only access to the data.
- Built an autonomous PR-review agent with Claude Code skills for the company Gitea: it triages open PRs, runs tests against a dev PostgreSQL, enforces repository policies and posts approve or request-changes reviews.
- Designed an on-prem AI service for a multi-tenant ERP: text-to-SQL and summaries where data never leaves the site, llama.cpp serving Qwen2.5-Coder-32B on a single RTX 3090, and pgvector plus PageIndex retrieval over ERP documentation.
- Engineered real-time RFID tracking and personnel identification in Go (Fiber, Echo) and Node.js with millisecond-level latency on PostgreSQL, plus Redis Pub/Sub queues for textile tracking with HR integration.
- Technologies: Go, LLM classification, MCP, Gemini, Groq, llama.cpp, Claude Code, Node.js, Laravel, PostgreSQL, Redis, RFID/IoT.

Senior Full Stack Developer

Gourmeturca.com, Istanbul, Türkiye

March 2021 – July 2022

Global gourmet e-commerce and operations platform

- Built the operations portal (orders, invoicing, shipments, transactional mail) and warehouse and stock management synced in real time with Oracle NetSuite ERP over REST and SOAP.
- Integrated DHL, FedEx and UPS for automated shipments, labels and tracking; delivered the API layer for the React Native app and scaled backend modules for global campaign traffic spikes.
- Technologies: PHP, Laravel, Oracle NetSuite, SOAP/REST APIs, React Native, MySQL, Redis.

Full Stack Developer

Sadıkoğulları Technology Communications Ltd., Türkiye

May 2020 – January 2021

- Built sentiment analysis applications for schools, containerized servers and applications with Docker, and shipped corporate web and e-commerce solutions.

Freelance Full Stack Developer

Self-employed, Türkiye

January 2011 – August 2019

- Delivered web platforms, e-commerce sites and Linux server infrastructure for SMEs (WordPress, OpenCart, Drupal, DNS, virtualization); the foundation of 100+ shipped projects.

PROJECTS

- **Atlas PM (Freelance CRM & Client Intake):** CRM panel and public intake form shipped as one Cloudflare Worker serving 4 domains; Next.js 15 via OpenNext, D1 + Drizzle ORM (34 tables), R2, KV, cron triggers; scrypt/TOTP authentication and an 11-layer spam defence. basvuru.harungecit.dev
- **DevBox (Open Source):** Desktop app for local development environments: runtimes, databases, web servers, .test domains, SSL and tunnels in one place. Technologies: Go, Wails. devboxapp.com
- **Turkish Payment Gateways AI Agent Docs (Open Source):** Machine-first integration specs that let coding agents implement bank Virtual POS gateways in any language, with golden test vectors for request signing. github.com/harungecit/turkish-payment-gateways-ai-docs
- **AI Infra Academy:** Bilingual app teaching LLM serving: VRAM and KV-cache sizing, TTFT, continuous batching, tensor parallelism and quantization. Technologies: React, TypeScript. ai-lab.harungecit.dev
- **Smart Changelists (Open Source):** VS Code extension bringing JetBrains-style changelists to Git; snapshots stay readable by CLI coding agents. Technologies: TypeScript. github.com/harungecit/smart-changelists

- **Vigilon (Open Source):** Multi-platform service monitoring with Telegram alerts and role-based access. Technologies: Go, SQLite, Docker. github.com/harungecit/vigilon
- **More open source:** PHP Email Validator (4,900+ disposable domains, MX checks), UBL Viewer (Turkish e-Invoice browser extension), IndepenDesk (Windows virtual desktops, C#).

TECHNICAL SKILLS

AI / LLM Engineering: AI agents, tool calling, function calling, structured output, text-to-SQL, RAG, PageIndex, pgvector, prompt engineering, persona and conversation design, decision flows, guardrails, human-in-the-loop, multi-provider LLM routing and failover, token and cost accounting, MCP servers

Models & Platforms: Anthropic Claude, Google Gemini, OpenRouter, Groq, NVIDIA NIM, OpenAI-compatible APIs, self-hosted llama.cpp (Qwen, Llama, Gemma, Nemotron), Laravel AI SDK, MCP SDKs (Go, TypeScript)

Decision Models: k-means++ segmentation, weighted scoring and recommendation models, rule engines, schema-validated LLM output

AI Development Tools: Claude Code (skills, subagents, MCP), OpenAI Codex, Gemini CLI, Cursor, GitHub Copilot

Programming Languages: Python, Go, PHP 8.x, TypeScript, JavaScript, SQL, Bash, C#

Backend: Python (API integrations, automation jobs, Playwright and BeautifulSoup data pipelines, Flask), Node.js (Express, Socket.io, Hono, Next.js Server Actions), Go (Gin, Fiber, Echo, Wails), Laravel (Livewire, Inertia, Filament, Horizon, Sanctum), FrankenPHP

Frontend: React, Next.js (App Router, React Server Components), React Native, Vue.js, Alpine.js, Tailwind CSS, Vite

Databases & Messaging: PostgreSQL, MySQL, MariaDB, Redis, Elasticsearch, SQLite, MongoDB, RabbitMQ, Cloudflare D1, R2, KV, Drizzle ORM

APIs & Real-Time: RESTful APIs, gRPC, GraphQL, SOAP, WebSockets, Redis Pub/Sub, webhooks, OAuth 2.0, JWT

DevOps & Cloud: Docker, Docker Swarm, Kubernetes, GitHub Actions, GitOps, Cloudflare Workers, Cloudflare WAF, Nginx, Traefik, Caddy, Coolify, Linux, AWS, GCP, Hetzner, Grafana, Prometheus

Security: read-only query sandboxing, KVKK / GDPR data masking, AI code review, OAuth 2.0 / JWT hardening, scrypt, TOTP 2FA, HMAC-signed tokens, AES-GCM, rate limiting

EDUCATION

Computer & Instructional Technologies Education
Erzincan Binali Yıldırım University, Erzincan, Türkiye
September 2016 – June 2019

Science & Technology Education
Erzincan Binali Yıldırım University, Erzincan, Türkiye
September 2011 – May 2015

CERTIFICATIONS

- cPanel & WHM Administrator (CWA)
- CCNA Cert Prep: ICND2
- Cybersecurity Fundamentals

LANGUAGES

- English – Intermediate (B1)
- Turkish – Native
