YEARS IN SOFTWARE	YEARS LLM IN PRODUCTION	AI SYSTEMS SHIPPED	PROJECTS SHIPPED

01 SUMMARY

Senior AI Engineer and full-stack developer with **15+ years** in production software and **2+ years shipping LLM systems**. I work as a **forward-deployed AI engineer**: I sit with operations, support and sales teams, map how the work really flows, and turn it into **LLM agents with tool calling, decision rules, guardrails and cost controls** in production, from a text-to-SQL assistant with **PageIndex-style RAG** to an LLM triage service on four interchangeable providers including self-hosted llama.cpp. Polyglot backend in **Python, Go, PHP/Laravel and Node.js**; backend architect of a **TÜBİTAK 1501-funded** R&D platform.

LLM Agents · Tool Calling · RAG / PageIndex · MCP · Guardrails · Python · Go · PHP/Laravel · Node.js

02 PROFESSIONAL EXPERIENCE

Software Architect & AI Engineer — CatchPad Smart Training Platform

Apr 2022 — Present

AI-powered athletic training platform · TÜBİTAK 1501 R&D project · lead backend architect (Laravel 13, PostgreSQL, Redis, Elasticsearch, React, GitHub Actions), 1,400+ commits

- Shipped an **admin AI assistant** on the Laravel AI SDK: a page-aware, tool-calling agent for text-to-SQL and metric lookups behind a **6-layer read-only guard** (SELECT-only, table blocklist, read-only transaction, timeout, row cap, KVKK/GDPR masking).
- Grounded it with **PageIndex-style, vectorless RAG**: the agent navigates the index of a 59-module panel manual and a contract-tested metric glossary, then pulls only the matching sections into context.
- Built **multi-provider failover** (OpenRouter Gemma 4 → Gemini Flash → NVIDIA NIM Nemotron) with in-request model fallbacks, degenerate-answer detection and retry, admin-set provider priority and per-chat limits and token tracking.
- Shipped **AI Coach**: four structured-output agents for nutrition plans, meals, training programmes and progress insights. Tools pin the model to real catalogue IDs, a code-level guard enforces 14 allergens and diet rules, results stay drafts, tokens and cost are logged.
- Delivered the **TÜBİTAK AI Lab** work package: k-means++ athlete segmentation (silhouette, Davies-Bouldin), weighted 0–100 performance scoring and an LLM drill generator validated by JSON Schema with a deterministic rule-engine fallback.
- Designed an **omnichannel AI sales & support centre**: one agent core for voice, WhatsApp, e-mail and Telegram; a narrow tool API with identity levels, capped discounts and human handoff; persona design, eval-gated model choice, shadow mode.
- Replaced a quota-bound **Make.com workflow with a Python service** (Shopify GraphQL → ClickUp → Google People API) on GitHub Actions: diff-only writes, rate limiting, checkpointed state and safety brakes.

Senior Full Stack Developer & AI Engineer — USTEK RFID Elektronik Yazılım A.Ş.

Jul 2022 — Present

Enterprise RFID, IoT and ERP software for textile tracking — Istanbul

- Built an **LLM support-intelligence service in Go** that reads customer support channels on WhatsApp, classifies every message by type, priority, category, sentiment and resolution, and translates it across 11 supported languages. Version 1 ran on Node.js (Express, Socket.io).
- Designed its **runtime-switchable provider layer** (Gemini, Groq Llama 3.3 70B, OpenRouter, self-hosted llama.cpp) with usage tracking; prompts are generated from YAML domain profiles and pinned by golden-file tests, and an **MCP server** (Go SDK) gives Claude read-only access to the data.
- Built an **autonomous PR-review agent** with Claude Code skills for the company Gitea: it triages open PRs, runs tests against a dev PostgreSQL, enforces repository policies and posts approve or request-changes reviews.
- Designed an **on-prem AI service** for a multi-tenant ERP: text-to-SQL and summaries where data never leaves the site, llama.cpp serving Qwen2.5-Coder-32B on a single RTX 3090, and pgvector + PageIndex retrieval over ERP docs.

- Engineered **real-time RFID tracking and personnel identification** in Go (Fiber, Echo) and Node.js with millisecond-level latency on PostgreSQL, plus Redis Pub/Sub queues for textile tracking with HR integration.

Senior Full Stack Developer — Gourmeturca.com

Mar 2021 — Jul 2022

Global gourmet e-commerce & operations platform

- Built the **operations portal** (orders, invoicing, shipments, transactional mail) and warehouse and stock management synced in real time with **Oracle NetSuite ERP** over REST and SOAP.
- Integrated **DHL, FedEx and UPS** for automated shipments, labels and tracking; delivered the API layer for the React Native app and scaled backend modules for global campaign traffic spikes.

Full Stack Developer — Sadıkoğulları Technology Communications Ltd.

May 2020 — Jan 2021

- Built **sentiment analysis applications** for schools, Dockerized servers and apps, shipped corporate web and e-commerce.

Freelance Full Stack Developer — Self-employed

Jan 2011 — Aug 2019

- **Web platforms, e-commerce and Linux server infrastructure** for SMEs, the foundation of 100+ shipped projects.

03 SELECTED PROJECTS & OPEN SOURCE

Atlas PM — Freelance CRM & Client Intake

CRM panel + public intake form as **one Cloudflare Worker serving 4 domains**: Next.js 15 via OpenNext, D1 + Drizzle (34 tables), R2, KV, cron; scrypt/TOTP auth, 11-layer spam defence.

`2026– · Next.js · TypeScript · Cloudflare Workers`

DevBox OSS

Desktop app for **local dev environments**: runtimes, databases, web servers, .test domains, SSL and tunnels in one place.

`2026– · Go · Wails · devboxapp.com`

Turkish Payment Gateways — AI Agent Docs OSS

Machine-first integration specs that let coding agents implement bank Virtual POS gateways in any language, with golden test vectors for signing.

`2026 · Agent-ready docs · Python-verified vectors`

AI Infra Academy

Bilingual app teaching **LLM serving**: VRAM and KV-cache sizing, TTFT, continuous batching, tensor parallelism, quantization.

`2025– · React · TypeScript · ai-lab.harungecit.dev`

Smart Changelists OSS

VS Code extension bringing **JetBrains-style changelists** to Git; snapshots stay readable by CLI coding agents.

`TypeScript · VS Code Marketplace`

Vigilon OSS

Multi-platform service monitoring with **Telegram alerts** and role-based access.

`Go · SQLite · Docker`

More open source: PHP Email Validator (4,900+ disposable domains) · UBL Viewer (e-Invoice viewer) · IndepenDesk (C#)

04 TECHNICAL SKILLS

AI / LLM Engineering	**Agents & tool calling**, structured output, text-to-SQL, **RAG** (PageIndex, pgvector), prompt, persona and conversation design, decision flows, **guardrails** and human-in-the-loop, multi-provider failover, token and cost accounting, **MCP servers**, decision models (k-means++, scoring, rule engines)
Models & Platforms	**Anthropic Claude**, **Google Gemini**, OpenRouter, Groq, NVIDIA NIM, OpenAI-compatible APIs, self-hosted **llama.cpp** (Qwen, Llama, Gemma, Nemotron), Laravel AI SDK, MCP SDKs (Go, TypeScript)
AI Dev Tools	Claude Code (skills, subagents, MCP), OpenAI Codex, Gemini CLI, Cursor, GitHub Copilot
Languages	**Python**, **Go**, **PHP 8.x**, **TypeScript / JavaScript**, SQL, Bash, C#
Backend	**Python** (API integrations, automation jobs, Playwright/BeautifulSoup pipelines, Flask) · **Node.js** (Express, Socket.io, Hono, Next.js) · **Go** (Gin, Fiber, Echo, Wails) · **Laravel** (Livewire, Filament)
Frontend	**React**, **Next.js** (App Router, RSC), React Native, Vue.js, Alpine.js, Tailwind CSS
Data & APIs	**PostgreSQL**, MySQL, Redis, Elasticsearch, SQLite, MongoDB, RabbitMQ, Cloudflare D1/R2/KV · REST, **gRPC**, GraphQL, SOAP, **WebSockets**, webhooks
DevOps & Security	**Docker** (Swarm), Kubernetes, GitHub Actions, GitOps, **Cloudflare** (Workers, WAF), Nginx, Traefik, Linux, AWS, GCP, Hetzner, Grafana · KVKK/GDPR masking, OAuth/JWT, TOTP 2FA, HMAC, AES-GCM

05 EDUCATION

Computer & Instructional Technologies
Erzincan Binali Yıldırım University · 2016 — 2019

Science & Technology Education
Erzincan Binali Yıldırım University · 2011 — 2015

06 CERTIFICATIONS & LANGUAGES
